No 305/2011 of the European  
Parliament and of the Council of 9  
March 2011

MEMBER OF EOTA

## European Technical Assessment ETA-19/0816 of 2019/12/13

### I General Part

**Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S**

**Trade name of the construction product:**

CA POLY - EKOR Injection anchor

**Product family to which the above construction product belongs:**

Bonded anchor with anchor rod made of galvanized steel or stainless steel of sizes M8, M10 and M12, for use in masonry

**Manufacturer:**

Torggler Chimica S.p.A  
Via Prati Nuovi, 9  
IT-39020 Marlegno (BZ)  
Tel. +39 0473 282400  
Internet [www.torggler.com](http://www.torggler.com)

**Manufacturing plant:**

Torggler Chimica S.p.A  
Manufacturing plant II

**This European Technical Assessment contains:**

22 pages including 17 annexes which form an integral part of the document

**This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:**

EAD 330076-00-0604, Metal injection anchors for use in masonry

**This version replaces:**

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (except the confidential Annexes referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

## **II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT**

### **1 Technical description of product and intended use**

#### **Technical description of the product**

The Injection system CA POLY - EKOR Injection anchor is a bonded anchor (injection type) consisting of a mortar cartridge with CA POLY - EKOR Injection anchor injection mortar, a perforated sleeve, and an anchor rod with hexagon nut and washer in the range of M8, M10 and M12.

The steel elements are made of zinc coated steel or stainless steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry.

An illustration of the product and intended use is given in Annex A1 and Annex A2.

The characteristic material values, dimensions and tolerances of the anchors not indicated in Annexes shall correspond to the respective values laid down in the technical documentation<sup>1</sup> of this European Technical Assessment.

The anchors are intended to be used with embedment depth given in Annex A3, Table A1. For the installed anchor see Figure given in Annex A2. The intended use specifications of the product are detailed in the Annex B1.

### **2 Specification of the intended use in accordance with the applicable EAD**

The anchors are intended to be used for anchorages for which requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirements 1 and 4 of Regulation (EU) 305/2011 shall be fulfilled and failure of anchorages made with these products would compromise the stability of the works, cause risk to human life and/or lead to considerable economic consequences.

The anchor is to be used only for anchorages subject to static or quasi-static loading in solid masonry (use

category b) or hollow or perforated masonry (use category c) according to Annex B8. The mortar strength class of the masonry must be M 2,5 according to EN 998-2:2010 at minimum.

The anchors may be installed in Category w/d: installation in wet substrate and use in structures subjected to dry, internal conditions.

The anchors may be used in the following temperature range:

a) -40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C),

b) -40°C to +50°C (max. short term temperature +50°C and max. long term temperature +40°C).

Elements made of galvanized steel or stainless steel may be used in structures subject to dry internal conditions only.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the anchor of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

---

<sup>1</sup> The technical documentation of this European Technical Assessment is deposited at ETA-Danmark and, as far as relevant for the tasks of the Notified bodies involved in the attestation of conformity procedure, is handed over to the notified bodies.

### **3 Performance of the product and references to the methods used for its assessment**

#### **3.1 Characteristics of product**

##### **Mechanical resistance and stability (BWR 1):**

The essential characteristics are detailed in the Annex from C1 to C3.

##### **Safety in case of fire (BWR 2):**

The essential characteristics are detailed in the Annex from C4.

##### **Hygiene, health and the environment (BWR3):**

No performance assessed

##### **Safety in use (BWR4):**

For basic requirement Safety in use the same criteria are valid for Basic Requirement Mechanical resistance and stability (BWR1).

##### **Sustainable use of natural resources (BWR7)**

No performance determined

Other Basic Works Requirements are not relevant

#### **3.2 Methods of assessment**

The assessment of fitness of the anchor for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of the Basic Requirements 1 and 4 has been made in accordance with the "European Assessment Document, EAD 330076-00-0604, Metal injection anchors for use in masonry".

#### **4 Attestation and verification of constancy of performance (AVCP)**

##### **4.1 AVCP system**

According to the decision 1997/177/EC of the European Commission, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 1.

#### **5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark prior to CE marking.

Issued in Copenhagen on 2019-12-13 by

Thomas Bruun  
Manager, ETA-Danmark

- ① Cartridge
- ② Sealing cap
- ③ Mixer
- ④ Anchor threaded rod
- ⑤ Washer
- ⑥ Hexagon nut
- ⑦ Plastic sleeve

**The base materials are divided in to the following groups:**

Masonry group b: metal injection anchors for use in solid masonry.

Masonry group c: metal injection anchors for use in hollow or perforated masonry.

**Use category in respect of installation and use:**

Category w/d: installation in wet substrate and use in structures subjected to dry, internal conditions.

**Temperature range:**

-40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C)

-40°C to +50°C (max. short term temperature +50°C and max. long term temperature +40°C)

Threaded rod types and dimensions

**Annex A3**

of European  
Technical Assessment  
ETA-19/0816

**Table A2: Threaded rods materials**

| Part         | Designation  |  |
|--------------|--|--|
|              | Steel, zinc plated $\geq 5 \mu\text{m}$ acc. to EN ISO 4042                              | Stainless steel  |
| Threaded rod | Steel, property class 5.8 or 6.8, acc. to EN ISO 898-1                                   | Material 1.4401 / 1.4571 acc. to EN 10088; property class 70 (A4-70) acc. to EN ISO 3506 |
| Hexagon nut  | Steel, property class 5 or 6, acc. to EN 20898-2; corresponding to threaded rod material | Material 1.4401 / 1.4571 acc. to EN 10088; property class 70 (A4-70) acc. to EN ISO 3506 |
| Washer       | Steel, acc. to EN ISO 7089; corresponding to threaded rod material                       | Material 1.4401 / 1.4571 acc. to EN 10088; corresponding to threaded rod material        |

Commercial standard threaded rods with:

- material and mechanical properties according to Table 2;
- confirmation of material and mechanical properties by inspection certificate 3.1 according to EN-10204:2004;
- marking of the threaded rod with the embedment depth.

**Table A3: Injection mortar**

| Product  | Composition   |
|--|---|
| <b>CA POLY - EKOR Injection anchor two components injection mortar</b> | Additive: quartz<br>Bonding agent: polyester resin styrene free<br>Hardener: dibenzoyl peroxide |

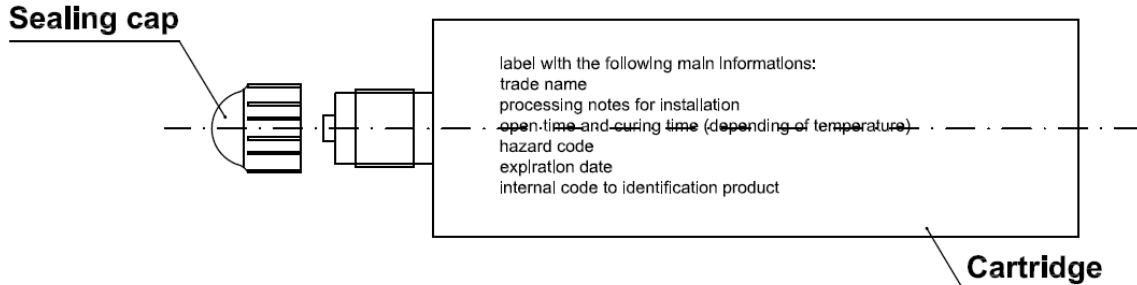

**Table A4: Minimum curing time<sup>3)</sup>**

| Masonry temperature | Processing time | Minimum curing time <sup>5)</sup> |
|---------------------|-----------------|-----------------------------------|
| 0°C <sup>4)</sup>   | 25 min          | 180 min                           |
| 5°C <sup>4)</sup>   | 15 min          | 120 min                           |
| 10°C                | 12 min          | 90 min                            |
| 15°C                | 8 min           | 60 min                            |
| 20°C                | 6 min           | 45 min                            |
| 25°C                | 4 min           | 30 min                            |
| 30°C                | 3 min           | 20 min                            |

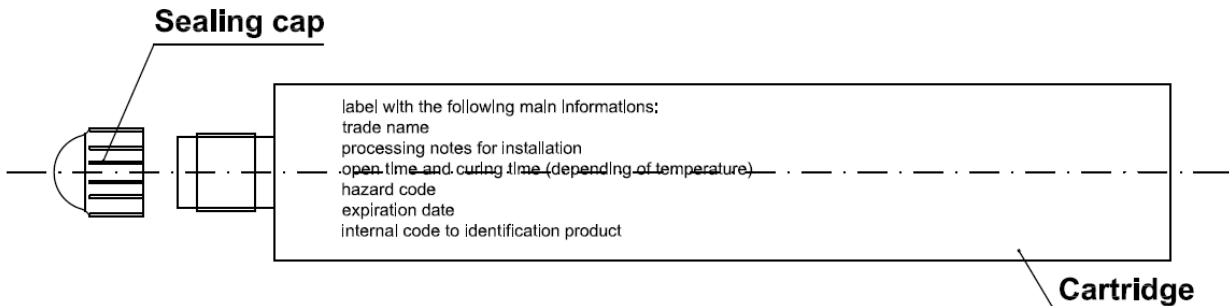

- 3) the minimum time from the end of the mixing to the time when the anchor may be torque or loaded (whichever is longer).  
 4) minimum resin temperature recommended, for injection between 5°C and 0°C, equal to 5°C.  
 5) minimum curing time for dry and wet conditions.

 of European  
 Technical Assessment  
 ETA-19/0816

**Plastic sleeve for hollow/perforated masonry: nominal dimensions and material**

**Plastic sleeve 20x85 for M12**  
 Nominal diameter 20 mm  
 Nominal length 85 mm

**Lateral and top view of plastic centering cap for 20x85 plastic sleeve**

**Plastic sleeve 15x85 for M10**  
 Nominal diameter 15 mm  
 Nominal length 85 mm

**Lateral and top view of plastic centering cap for 15x85 plastic sleeve**

**Plastic sleeve 12x80 for M8**  
 Nominal diameter 12 mm  
 Nominal length 80 mm

**Lateral and top view of plastic centering cap for 12x80 plastic sleeve**

**Table A5: Plastic sleeve materials**

| Part           | Designation                            |
|----------------|--|
| Plastic sleeve | Polypropylene (PP) / Polyethylene (PE) |
| Centering cap  | Polypropylene (PP) / Polyethylene (PE) |

**CA POLY - EKOR Injection anchor**

Plastic sleeve

**Annex A6**  
 of European  
 Technical Assessment  
 ETA-19/0816

**Use:**

The anchors are intended to be used for anchorages for which requirements for mechanical resistance and stability and safety in use in the sense of the Basic Requirements 1 and 4 of Regulation 305/2011 (EU) shall be fulfilled and failure of anchorages made with these products would compromise the stability of the works, cause risk to human life and/or lead to considerable economic consequences.

**Anchors subject to:**

- Static and quasi-static loads: sizes from M8 to M12.

**Base materials:**

- Solid masonry (masonry group b) or hollow or perforated masonry (masonry group c) according to Annex B7. The mortar strength class of the masonry has to be M 2,5 according to EN 998-2:2010 at minimum.

**Temperature range:**

The anchors may be used in the following temperature range:

- a) -40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C),
- b) -40°C to +50°C (max. short term temperature +50°C and max. long term temperature +40°C).

**Use conditions (Environmental conditions):**

Threaded rods:

- a) Carbon galvanized steel class 5.8 or 6.8 according to EN ISO 898-1 for dry internal conditions.
- b) Stainless steel A4-70 and A4-80 according to EN ISO 3506 for dry internal conditions.

Nuts and washers:

Corresponding to anchor rod material above mentioned for the different environmental exposures.

**Installation:**

- Condition w/d: installation in dry or wet substrate and use in structures subjected to dry, internal conditions.
- Perforation with drilling machine

**Proposed design methods:**

- TR054, Design method A

| <p>1</p>                                       |    | <p>Drill the hole with the correct diameter and depth using a rotary machine. Check the perpendicularity of the hole during the drilling operation.</p>   |
| <p>2</p>                                       |  <p><b>4x Blower Pump</b><br/>(instead of the blower manual pump it is also possible to use the compressed air free oil)</p> <p><b>2x Brush</b></p> <p><b>4x Blower Pump</b></p> | <p>Clean the hole from drilling dust: the hole shall be cleaned by at least 4 blowing operations, by at least 2 brushing operations followed again by at least 4 blowing operations; before brushing clean the brush and check (see Table B3 in Annex B3) if the brush diameter is sufficient. For the blower tools see Annex B3.</p>   |
| <p>3</p>                                       |   | <p>For sizes 400 ml and 280 ml unscrew the front cup, screw on the mixer and insert the cartridge in the gun. For the size 300 ml and 165 ml, unscrew the front cup, pull-out the steel closing clip according to the following operations:</p> <ul style="list-style-type: none"> <li>- insert the mixer in the eye of the plastic extractor,</li> <li>- pull the extractor to unhook the steel closing clip of the foil. After that, screw on the mixer and insert the cartridge in the gun.</li> </ul> |
| <p>4</p>                                       |    | <p>Before starting to use the cartridge, eject a first part of the product, being sure that the two components are completely mixed. The complete mixing is reached only after that the product, obtained by mixing the two components, comes out from the mixer with a uniform color.</p>  |
| <p>5</p>                                       |    | <p>Remove the centering cap from the plastic sleeve. Insert in the hole the plastic sleeve (see Annex A6). Fill the sleeve uniformly starting from the sleeve bottom. Remove the mixer slowly bit by bit during pressing-out: remove the mixer about 10 mm for each pressing operation. Filling the sleeve completely.</p>  |
| <p>6</p>                                       |    | <p>Put on the centering cup on the filled plastic sleeve. Insert immediately the rod, marked according to the proper anchorage depth, slowly and with a slight twisting motion, removing excess of injection mortar around the rod. Observe the processing time according Annex A4. Wait the curing time according Annex A4.</p>  |

**Table C4: Reaction to fire.**

| ESSENTIAL CHARACTERISTICS | PERFORMANCE   |
|---------------------------|---|
| <b>Reaction to fire</b>   | In the final application the thickness of the mortar layer is about 1 to 2 mm and most of the mortar is material classified class A1 according to EC Decision 96/603/EC. Therefore, it may be assumed that the bonding material (synthetic mortar or a mixture of synthetic mortar and cementitious mortar) in connection with the metal anchor in the end use application do not make any contribution to fire growth or to the fully developed fire and they have no influence on the smoke hazard. |

**Table C5: Resistance to fire.**

| ESSENTIAL CHARACTERISTICS | PERFORMANCE |

**Table C6: Terminology and symbols**

| <b>TERMINOLOGY AND SYMBOLS</b>          |   |
|---|---|
| d                                       | Diameter of anchor bolt or thread diameter  |
| d <sub>0</sub>                          | Drill hole diameter   |
| d <sub>fix</sub>                        | Diameter of clearance hole in the fixture   |
| h <sub>ef</sub>                         | Effective anchorage depth   |
| h <sub>l</sub>                          | Depth of the drilling hole  |
| h <sub>min</sub>                        | Minimum thickness of concrete member  |
| T <sub>inst</sub>                       | Torque moment to installation   |
| t <sub>fix</sub>                        | Thickness to be fixed   |
| S <sub>min</sub>                        | Minimum allowable spacing   |
| C <sub>min</sub>                        | Minimum allowable edge distance   |
| k <sub>surc,N</sub> [-]                 | Factor for concrete cone in uncracked concrete  |
| S <sub>cr,N</sub>                       | Characteristic spacing between two different anchors for the concrete cone failure  |
| C <sub>cr,N</sub>                       | Characteristic edge distance between two different anchors for the concrete cone failure  |
| S <sub>cr,sp</sub>                      | Spacing for ensuring the transmission of the characteristic tensile resistance of a single anchor without spacing and edge effects in case of splitting failure       |
| C <sub>cr,sp</sub>                      | Edge distance for ensuring the transmission of the characteristic tensile resistance of a single anchor without spacing and edge effects in case of splitting failure |
| N <sub>Rk,s</sub>                       | Characteristic tension resistance for steel failure   |
| N <sub>Rk,c</sub>                       | Characteristic tension resistance for concrete cone failure   |
| V <sub>Rk,s</sub>                       | Characteristic shear resistance for steel failure without lever arm   |
| k <sub>7</sub>                          | Ductility factor for steel failure in shear load  |
| M <sup>0</sup> <sub>Rk,s</sub>          | Characteristic shear resistance for steel failure with lever arm  |
| V <sub>Rk,c</sub>                       | Characteristic shear resistance for concrete edge failure   |
| d <sub>nom</sub> [mm]                   | Outside diameter of fastener  |
| l <sub>f</sub> [mm]                     | Parameter for evaluation of concrete edge failure   |
| τ <sub>Rk,ucr</sub>                     | Characteristic bond resistance in un-cracked concrete class C20/25  |
| γ <sub>2</sub> = γ <sub>inst</sub>      | Partial safety factors for installation   |
| ψ <sub>cr,ucr</sub>                     | Increasing factor for un-cracked concrete   |
| k = k <sub>3</sub> = k <sub>8</sub> [-] | Factor for concrete pry-out failure   |
| F                                       | Service load in un-cracked (ucr) or cracked concrete (cr) in tensile or shear load  |
| δ <sub>0</sub>                          | Short term displacement under service load in un-cracked (ucr) or cracked concrete (cr) for tensile (N) or shear load (V)   |
| δ <sub>∞</sub>                          | Long term displacement under service load in un-cracked (ucr) or cracked concrete (cr) for tensile (N) or shear load (V)  |
| NPA                                     | No performance assessed   |
