the solution

”

Torggler is passion!
For quality, for innovation and for
professionalism!

“

Benno Pamer

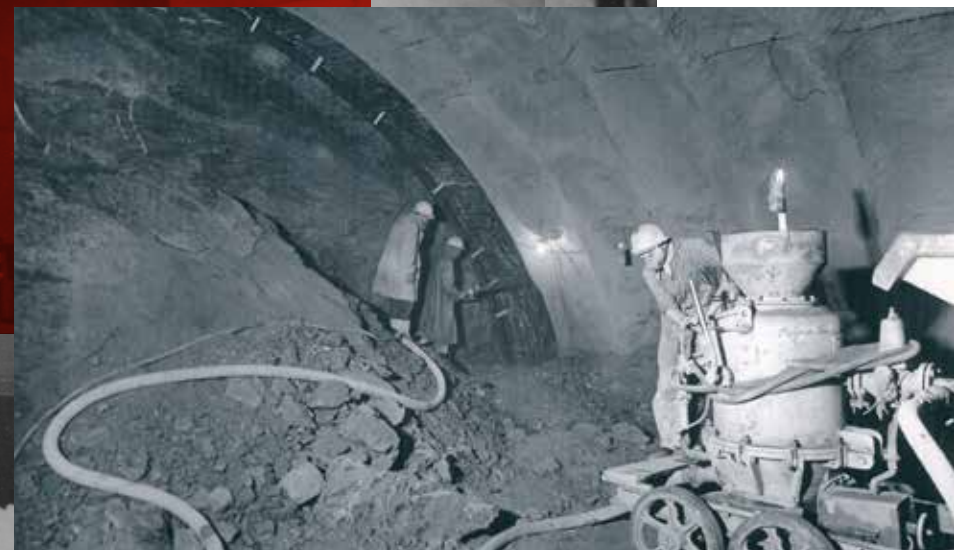

A handwritten signature in black ink, appearing to read "Pamer Benno". The signature is fluid and cursive, with the first name "Pamer" written in a larger, more prominent script than the last name "Benno".

156 years

history and tradition

We have more than 156 years
of history and tradition and
we feel younger and more
dynamic than ever.

We are a South Tyrolean company in the spirit with which we look at our job, one of quality and precision.

We are international in our vision, because professionalism knows no boundaries.

We are manufacturers of technical building systems and products. We provide assistance and solutions to those who, every day, work in the industry to improve the quality of peoples lives.

1865

Established as a small family business, it rises to become one of the most important companies in the region.

Nowadays, it is an international producer for technical building materials.

Torggler

We build the future

Focusing on the world around us

In our industry it is essential to pay attention to our environment.

This is why we take a close look at our solutions and even our habits. To make them better in terms of both impact and efficiency, because we know: only by taking care of the present we can build a better future.

SEALANTS

The primary function of a sealant is to adhere to the two surfaces of a joint and prevent the passage of fluids while still allowing the two parts to move. Torggler sealants are formulated to best meet these functions in all professional applications: window/door frames, construction, plumbing, furniture, carpentry, joinery and for all applications in the home. The proposed range allows users to choose the Torggler product most suitable for their needs in order to create a work done to perfection: to seal, fill, close and glue in a professional way, with the certainty of guaranteeing maximum quality and performance over time to your customers.

POLYURETHANE FOAMS

There is polyurethane foam in the toolbox of every professional: thanks to its versatility, it is suitable for various uses in construction, such as fixing doors and windows, filling cavities or gluing blocks in construction but not only. The range of Torggler foams is very wide and, depending on the use, insulating capacity and resistance needed, it is possible to choose the polyurethane foam best suited to your work.

WATERPROOFING

Absolute excellence is the standard that Torggler adopts in the development of its products. In its constant search for the best waterproofing solutions, Torggler has developed a series of products that have distinguished it as a reliable partner of the highest quality.

The Product Development Centre is the place where engineers and technicians carry out research and selection of all components of Torggler's waterproofing product with the aim to constantly find cutting-edge solutions of the highest level.

FLOORING

Both residential and industrial flooring require high workability, high resistance to traffic (both pedestrian and non-pedestrian) and, above all, high durability.

This is why innovation never stops: from screeds to self-levelling mortars, to floor armouring, the quality and excellence of Torggler's solutions are the key to success.

TILES AND NATURAL STONE INSTALLATION

With many years of experience in developing the highest quality adhesives for tile and natural stone installation, Torggler is a reference point in the construction of your flooring system. The wide range of products for bonding and sealing, which comply with European standards, offers guaranteed durability and flexibility to ensure the system's resistance to abrasion and long-term protection.

PARQUET AND SYNTHETIC FLOOR INSTALLATION

The new product range of adhesives allows specific, professional and high performance laying of wood, PVC and linoleum flooring for residential, commercial and industrial use. The Power Glue line consists of low-emission adhesives with excellent adhesion of the flooring to the substrate and the ability to absorb deformation and mechanical stress.

CONCRETE RESTORATION

In the recent years there has been increasing interest in the field of concrete restoration, resulting in strict regulations. The European reference norm EN 1504 defines the methods and properties of the products used for the repair and protection of concrete structures. Torggler's products comply with the European standard and are therefore ideal for the professional repair of concrete.

ANCHORING AND MOUNTING

Reliability, innovation and responsibility are the hallmarks of Torggler products. These three values are also reflected in our anchoring and fixing systems combined with long-term performance. Our products cover a wide range of applications, from the simplest and most practical to the most technically demanding, in order to meet all specific requirements.

RESTORATION

The main causes of deterioration of plasters and masonry are in most cases due to ascending moisture and infiltration humidity. In both cases, water penetrates the masonry and carries the salts dissolved in it. With this in mind, Torggler has developed products with very high levels of performance in order to solve even the most critical moisture problems and guarantee their long-term effectiveness.

THERMAL INSULATION

A well-insulated building ensures pleasantly warm temperatures in winter and protects against heat in summer. The indoor climate is balanced throughout the year, without major temperature fluctuations. Torggler's thermal insulation systems fulfil all these needs in the best ways possible.
